

## **The Quandary of Contact-Tracing Tech**

**Rachel Robison-Greene**

Given that this technology can be used to prevent the deaths of thousands of people, why should we take individual objections seriously? Is it really any different than telling smokers they can't smoke in public spaces and potentially endanger other people's health?

Do opt-in programs represent the ideal balance between public health and personal privacy? Are there reasons we might object to relying on voluntary measures like this?

Who do you trust more with your personal data: the government or corporations? Are you more cautious when providing sensitive information on government websites or when reviewing the terms and conditions on apps? Why? What kinds of concerns might we have with either?
